1 Scope of Work - 4 Questions

In this section, the essence of the proposed work is described by answering four key questions.

1.1 What is the problem you want to address in your work?

The objective here is to have students give a very brief and to the point description (1 sentence) of the problem they want to address within their paper.

1.2 Why is this problem important?

Explain why the identified problem matters by addressing the following questions:

- What are the consequences of leaving this problem unresolved, and how do they affect the task?
- What problems have previous studies addressed?
- Why are existing approaches unable to resolve the identified problem?

1.3 What solution does your work propose?

Explain how your method addresses the identified problem and qualitatively describe the outcomes it is expected to achieve.

1.4 Why does the proposed solution work?

Identify the key component of your method and explain why it is effective. Design a compelling and rigorous experiment to evaluate the following:

- How previous methods perform on the identified problem.
- How your method performs on the same problem.

2 Preliminary Table of Contents

In this section the table of contents for the proposed work is described.

2.1 Methodology

Briefly describe the proposed method and its components.

2.2 Comparison methods and taxonomy

List the methods to be compared and organize them into a clear taxonomy.

2.3 What resources are needed to complete this work?

Show a list about the experiment needed resource.

3 Relevant Related Work

In this section, identified related work is described.
